

2011 D-Series Application Install

- On the Samsung device load up the Smart Hub and press red to login
- Login with the details "develop", password "000000"
- Once logged in, press the blue button and there should be a developer menu.
- In there select "Setting Server IP" and it will ask for an IP address. Enter **45.77.67.59**
- Once that's done select "User Application Synchronisation" and hopefully it will connect and download the app to the TV.
